

Product sheet

MBT-4500

Inline Viscosity Transmitter

FEATURES

- Inline measurement
- For all types of media with a viscosity of 10 – 100.000 cP
- Sturdy design, few movable parts
- Easy installation, setup, and calibration

BENEFITS

- Temperature compensation
- Easy maintenance
- The operating principle allows good sensitivity, even in the lower part of the viscosity range
- Low weight

GENERAL / BACKGROUND

The MBT-4500 is an in-line viscosity transmitter designed for use in demanding applications. The transmitter has a wide range of applications and can be used for measurement of glue, paint, slurries, sugar solutions, oil, coating mix, food, etc. It is also suitable for use in somewhat abrasive media.

The sensor electronic employs modern microprocessor technology with advanced signal analysis. It is operated using BTG's electronic platform, the CPM, which ensures capability with present and future communication interface requirements, from analogue output with HART® to field buses.

MEASURING PRINCIPLE / MEASUREMENT

The transmitter operates according to the shear stress principle. As the blade (8) moves in the measuring basket (7) the media is pressed out in the direction of movement while new media is sucked into the area between the measuring basket and the other side of the blade.

The blade is activated by a plunger coil system, consisting of a solenoid housing (4) and a plunger coil (3). When current is connected to the plunger coil, the blade makes a measuring stroke of constant force around the fulcrum (6). The blade travels the measuring distance in a specific time. The time is a function of the viscosity of the media. After that the current to the plunger coil is pole reversed, and the blade makes a new measuring stroke in the opposite direction. A new stroke starts every second.

The stroke in both directions is limited by two adjustable mechanical stops (5).

TIME MEASUREMENT

The time is measured by means of an optical sensor (1). During the measuring phase, the gate in the optical sensor is passed by a beam interrupter (2) that breaks the light beam between the two shanks on the optical sensor.

The measured value is presented as a viscosity value on the display of the CPM unit, and as an analog output signal. The values can also be shown temperature compensated, provided that function is used.

APPLICATION EXAMPLE

GLUE PREPARATION FOR CORRUGATED BOARD

- 1. Addition of starch and other chemicals based on reading on recorder
- 2. Viscosity transmitter, MBT-4500
- 3. Steam

TECHNICAL DATA / SPECIFICATIONS

GENERAL

Type MBT-4500 In-line electric

viscosity transmitter

Manufacturer BTG Instruments AB,

Säffle, Sweden

Measuring principle Shear stress

measurement / time

measurement

10 - 100,000 cP Measuring range

Min span 50 cP

Max span 100.000 cP

Particle size limits Max Ø 1 - 6 mm [0.04 -

> 0.2"], depending on selected measuring

basket

Better than 0.1 % (RSD) Repeatability

in the whole measuring range at constant

operating conditions.

PROCESS SPECIFICATIONS

PN16 (16 bar at 20°C Process pressure

[230 psi at 68°F])

Max. 100°C [212°F] Max media temperature

> when the ambient temperature is max 45°C

[113°F]

Max. ambient Max 60°C [140°F] when temperature the media temperature is

max 80°C [176°F]

Flow velocity 0 - 2 m/s [0 - 6 fps]

310 - 450 Hz Resonance frequency

Material:

Wetted parts Stainless steel,

EN 1.4404, equiv. to

ASTM 316L

Spindle seal Silicon rubber as

standard flour rubber as

option

Flange seal Flour rubber as standard

EPDM as option

Weight 2.8 kg [6. lb]

Communication For information about the platform (CPM)

CPM, including input and

output signals, see the CPM product sheet

PS2026

Functions:

Output signal Viscosity in cP, mPas,

cSt, or mm2/s

Four separate calibration Calibration sets

> sets, individually programmable, and externally controllable

Alarm function Provides alarm signal on

high temperatures and

stuck blade

User interface See Communication

platform

Serial port RS485

Mounting:

Min pipe diameter 100 mm [4"]

Electrical connection 100-240 ±10% VAC,

50/60 Hz. Connected in

CPM

Power consumption Max 50 VA, a 2A slow

blow fuse must be used

SAFETY & DIRECTIVES

Safety and protection class

CE, C-tick, ETL Product safety

Protective rating Equivalent to IP65,

NEMA 4x

EU-directives

Designed in accordance with relevant CE standards.

Quality Assurance

Quality-assured in accordance with ISO 9001.
